## **Power Amp Updates for the Bia 120 Stereo Amp and the Eros 300 Monoblocks**

August 2023

### **What's included:**

- Test your tubes.
- Replace 2 Printed Circuit Boards and associated wiring.
- Replace several components throughout.
- Rewire input.
- Change fuse to 6.3 Amp on Bia 120. No change on the Eros 300.
- New hardware to secure toroid.
- Factory document to certify update.
- Issue 90 day warranty on update.
- Replace shipping box.
- Burn in for 24 hours before final tests.
- Your unit will have a listening session.

### **What's Not included in the update:**

- New tubes not included (please purchase all tubes directly from your favorite supplier)
- Repair of any preexisting problems outside the scope of the update. If that occurs, Zesto will contact you with an estimate and your approval before we proceed.
- No enclosure parts will be replaced unless requested and you will be given a quote.
- Because it is not an upgrade to a new model, no new logo badge will be issued.

### **What to expect:**

This update is extensive. We found that all these changes further reduce the noise and sonic resonance, as well as increasing the life of your tubes and overall reliability of the amps. You'll find that it is more dynamic, quieter and tightens the base.
